CONFERENCE COMMITTEE

Welcome from the General Chairperson

Prof. Maite Brandt-Pearce, University of Virginia

I am pleased to welcome you to the 43rd Asilomar Conference on Signals, Systems and Computers, a unique and special conference with its beautiful venue, relaxed atmosphere and outstanding technical presentations. I find myself coming back, year after year, and being rejuvenated by the experience, both physically and intellectually.

Asilomar's attractions are multifaceted. The venue offers an unsurpassed view of the Pacific Ocean and an intimate camp-like ambiance. Professors, students, and industry representatives can each find sessions of interest within the very diverse topics covered, from traditional signal processing and wireless communications to more modern areas such as digital photography and MIMO radar. The longer presentation times at Asilomar stimulate a deeper technical exchange and attract a good mix of old timers like myself and new eager faces that are the future of the conference and our field

The technical committee, chaired by Jim Schroeder of Harris Corporation, has put together a first-class program composed of 158 invited papers and 236 contributed papers. These have been organized into seven parallel tracks of oral talks with simultaneous poster sessions. Jim has been the best Technical Chair I could have dreamt of, and, from what I have seen, the papers are outstanding this year.

One of the highlights of the program is the Sydney Parker Memorial Lecture to be given by a trio of eloquent speakers, Dolores M. Etter, Geoffrey Orsak, and Sally Wood, who will enlighten us on "The Infinity Project: Ten Years Later". Delores Etter holds the Texas Instruments Distinguished Chair in Engineering Education at Southern Methodist University (SMU). Geoffrey Orsak is Dean of the Lyle School of Engineering at SMU. Sally Woods is currently a Program Director at the National Science Foundation. Their humorous and energetic style is sure to entertain us as we learn about the challenges of introducing engineering into secondary school curricula, i.e., how we will soon all be surpassed by 15 year olds.

We will host a student paper contest chaired this year by John Pierre of the University of Wyoming. A set of student finalist have been selected and will present their papers in front of a panel of judges on Sunday afternoon. The best three will receive awards and accolades at the beginning of the conference plenary session.

As General Chair I extend a warm invitation for you to participate in all aspects of the Asilomar conference: the plenary talk, student paper contest, oral and poster sessions, family style meals, and the obligatory walk along the beach. Enjoy!

The Infinity Project: Ten Years Later

Delores M. Etter
Southern Methodist University

Geoffrey Orsak
Southern Methodist University

Sally Woods
National Science Foundation

Abstract
The Infinity Project is a leader in high-tech engineering for secondary schools. Developed in 1999, it now reaches over 400 schools in 38 states. This presentation will discuss the initial goals of the program and the challenges of introducing engineering into secondary school curricula. It will also discuss the importance of providing a full package – cutting-edge curriculum, outstanding instructional materials, hands-on design projects, low-cost high impact classroom technology, and best-in-class professional development. We include an assessment of the impact of the Infinity Project – in quantitative and qualitative terms. Finally, we present a glimpse into the next phase of The Infinity Project, and its audience.

Biographies
Delores M. Etter holds the Texas Instruments Distinguished Chair in Engineering Education at Southern Methodist University (SMU). She is also the Director of the Caruth Institute for Engineering Education.
